Macro enables embedding of short and complex text, which can be remembered in shorter form in case you need it again. The macro is encrypted and automatically decrypted by the program. KEYLINUX Description: Linux Software License for Encryption or Decryption of Short Text Strings using Key-String (XOR) Scheme. KEYNTS Description: NTS is a program that encrypts and decrypts short strings on Windows using the Text Password scheme (XOR). You can use it to encrypt and decrypt passwords, web logins, credit card numbers, any short text string (for example notes, memos, passwords, etc) you wish to keep secret. NETCON Description: NETCON is a Windows based text and email encryption and decryption program that supports up to 100 accounts, 100 passwords, 20 attachments and 18 mail box sizes. NETCHEQ Description: Netcheq is a free, reliable and fast computer security program designed to encrypt and decrypt communications, passwords, credit card numbers, banking codes, web logins, notes, and files between two computers or between two devices via the Internet. Netcommander Description: Netcommander is a Netcommander product that can be used to view and retrieve encrypted files. It supports both symmetric and asymmetric encryption.

Netcommander does not hide the encryption algorithm from the user. As with other commercial products, it allows you to specify the method for encryption. You are free to select from 3 commercially supported algorithms: Key-Safe AES Double DES Netscape also provides you with the option to use your own algorithms. Netcommander is an easy-to-use tool for encrypting and decrypting files, folders, e-mails and contacts.

KEYVIP Description: VIP is an e-mail encryption tool for Windows. Encryption can be performed in the background while working on other files.

KEYVROL Description: With Vrol you can encrypt, decrypt and archive e-mails. You can also send encrypted e-mails directly to your e-mail account. In combination with other security software you can use the Vrol tool to encrypt and decrypt web pages.

KEYFS Description: Main functionality of the program is encrypting files and folders to make it unreadable by others. It also supports encrypting entire directories. You can also use password to encrypt folders and files. KeyFusion Description: KeyFusion is a powerful and
