Handles audio properties like limiters, fades, volumes, compressors, exporters, normalizers, encoders and more. NEW! Tweak the loudness of your music during the mix process. Correct your audio levels to the specified standard. Analyzes your complete audio mix to determine the loudness level, inform you if it's compliant with the loudness standard you specify, and normalize it if necessary. Includes presets for various loudness standards. Import audio clips to handle audio settings. Automatically generate log reports in CSV format. Compares audio to the loudness standard. Includes options to alter the limits, buttons, input/output limits, true peak, integrated, short-term, momentary, gating, loudness tolerance, and save history.
